

## distribution structure

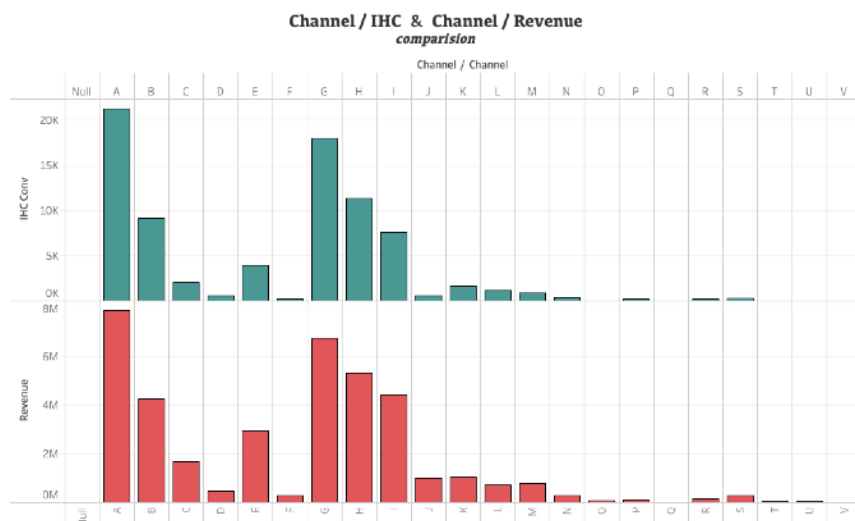

We can see that the company has 4 main distribution channels:

- 1) A
- 2) G
- 3) H
- 4) I

The largest of them is A, which in 2017 generated almost 8K of income. It is also worth noting the good result E.

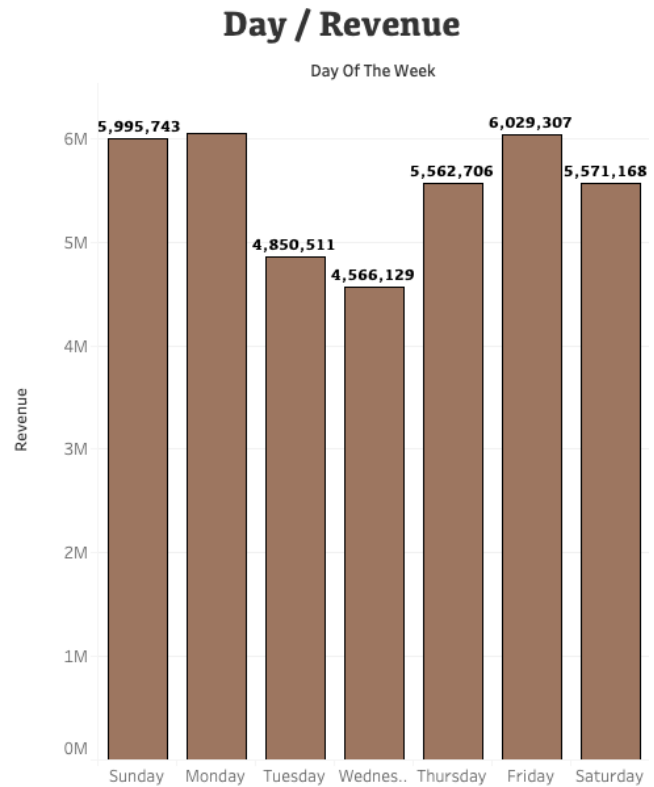

Comparing conversion and revenues, we can see almost identical dynamics.

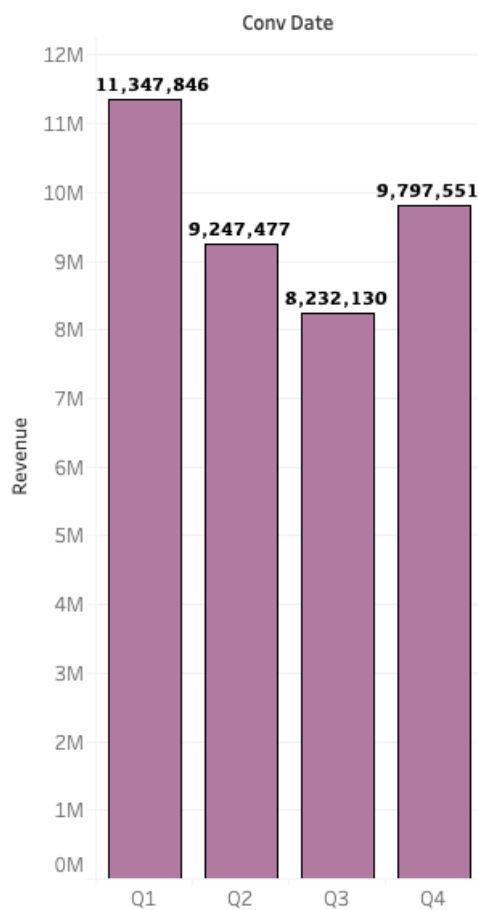

Analyzing the company's development in 2018, we notice a very diverse dynamics of revenue. There are periods that are very profitable, but you should pay attention to the periods when the income is very low (May and October).

The graph on the right shows that the day of the week has no effect on revenue.

### Quarter / Revenue

We can draw similar conclusions when we look at the quarterly impacts, however we see a slight disparity between Q1 and Q3.

Here's the income through the two best distribution channels in each two weeks. Both A and G exceeded 2K - as the only ones.
